

## User Scenario 1 - Creating a grocery list

**You have run out of food and need to go to the grocery store. You want to make a list of the things you need to buy so you remember it later.**

Task 1: Create a new tracking file

Task 2: Choose the option best suited for a grocery list

Task 3: Add all items you need to shop for (*provide a pen and sticky notes on paper prototype*)

Task 4: Save the list and close the app

**On your way to grocery store, you want to update one of item in current list.**

Task 1: edit one item in your current list

**Fast forward -- you are at the grocery store and you want to see what you need to buy. You remember you made a list before getting here.**

Task 1: Go to the grocery list you made.

Task 2: How would you mark the grocery items as you find them at the store?

**You're done with shopping, and you want to delete this list from your general tracking app.**

Task 1: Go to the grocery list you made.

Task 2: Delete the list.

## **User Scenario 2 - Measuring how much water you drink**

**You are trying to track your water intake because you'd like to stay hydrated.**

Task 1: Create a new tracking file

Task 2: Choose the option that will best allow you to keep track of your water intake

Task 3: Add your unit of measurement for tracking water intake as "cup"

Task 4: Insert the amount of water you have drank today

Task 5: Save and exit

**Fast forward -- You've been tracking your water intake for 2 weeks and you'd like to see how your water intake has changed over the course of 2 weeks**

Task 1: Find the water item you created to track your water intake

Task 2: How much water did you drink last time?

Task 3: You want to see a visualization of your progress -- where would you go for that information?

Test1

**You are trying to track your water intake because you'd like to stay hydrated.**

## **User Scenario 3 - Track Running**

**You are trying to track your running time.**

Task 1: Create a new tracking file

Task 2: Choose the option that will best allow you to track running

Task 3: Start tracking when you start running

Task 4: Pause for a while to keep hydrate

Task 5: Restart the tracker on running

Task 6: Stop tracker and exit

**Fast forward -- You've been tracking your running for a week and you would like to see your progress**

Task 1: Find your running tracking file

Task 2: Find running time visualization and change it to "weekly" display

## Scenario 1

Land on the homescreen, confused, pressed plus.  
Pressed Text based  
Is this separate notes, or just one note i just typing?  
Pressing the first line. Write pasta and beer 4  
on the sticky notes  
Save the nlsit  
Confused when go back to the homescreen  
Press list  
Press the next line  
Enter, shaving cream  
Save  
What happened when i dont' save

Go to the grocery list  
Don't know it;s a check circle  
Remember and go down the list and delete the whole thing  
Go back to the screen and noticed nothing - inefficient  
Pressed the setting  
Problem - delete the grocery list

Scenario 2  
Press the plus sign  
Write drink water  
Write cup - dropdown?  
Probably pressed save  
**Problem-** maybe i want to change the unit - edit button  
Pressed save

2 weeks  
Confused about the "9", if it is the total cups of the today or all time  
Press graph "like the graph"

### Scenario 3

Create a new tracking file  
Pressed time based  
Pressed start  
"Pause" is a better wording  
Waht does the "check" mean

Fast forward

Change the priority  
running  
Workout - not sure time based or numeric or the text  
How many times workout this week vs last week  
Not time based in the gym  
Like the running one
